VERSION WITH MARKINGS TO SHOW CHANGES MADE NOVEMBER 13, 2002

In the Claims:

Claims 10, 15, 17, 19-28, and 30 have been amended as follows:

10. The method of Claim [8] 9, wherein said price data set further includes an adjusted price, an adjusted quantity.

15. The method of Claim [13] 14, wherein comparing said adjusted market price total by said price total, includes determining a ratio by dividing said price total by said adjusted market price total, thereby creating the normalized price data value.

17. The method of Claim [15] 16, wherein comparing said summed market price total by said total type price, includes determining a ratio by dividing said total type price by said summed market price total, thereby creating the normalized price data value.

19. The method of Claim [17] 18, further comprising:
receiving a buy notice from said buyer client computer; and
transmitting a purchase order to one of said seller computers of said plurality of seller client computers.

20. The method of Claim [17] 18, further comprising:
receiving a plurality of product specification data sets from said plurality of buyer client computers; and

combining said plurality of product specification data sets, thereby creating one request for quote.

21. The method of Claim [17] 18, wherein said product specification data set includes information related to a buyer, said request for quote grade, quantity, tally, a method of shipment, and a ship date.

22. The method of Claim [17] 18, wherein the product specification data set comprises a plurality of quantity values for a number of like commodity items having different size parameters, a description of at least one commodity item, and a description of a delivery method.

23. The method of Claim [17] 18, wherein said price data set includes information to identify a seller, a quote price, shipment, and payment terms.

24. The method of Claim [22] 23, wherein said price data set further includes an adjusted price, and an adjusted quantity.

25. The method of Claim [17] 18, further comprising, receiving an additional price data set from the seller client computer, wherein the additional price data is a result from a renegotiated price.

26. The method of Claim [17] 18, further comprising, storing the normalized price data set in a database communicatively connected to the server.

27. The method of Claim [17] 18, wherein the normalizing step comprises, applying a metric transform to said price data set to create a normalized price data value.

28. The method of Claim [17] 18, wherein product specification data set comprises a plurality of quantity values for a number of similar commodity items having different size parameters, wherein the normalizing step comprises:

calculating a size total value based a summation of said commodity size parameters;

retrieving a price total from one of said price data sets;

retrieving a metric price data set, wherein said metric price data set comprises a comparable price per unit of one of said commodity items;

multiplying said price per unit by said calculated size total value, thereby creating an adjusted market price total; and

comparing said adjusted market price total by said price total, thereby creating a normalized price data set.

30. The method of Claim [17] 18, wherein product specification data set comprises a plurality of quantity values for a number of commodity items having different size parameters and type parameters, wherein the normalizing step comprises:

for each type of commodity item, calculating a size total value based a summation of said commodity size parameters;

for each type of commodity item, retrieving a price total from one of said price data sets;

summing said price total from each type of commodity item, thereby creating a total type price;

for each type of commodity item, retrieving a metric price data set, wherein said market price data set comprises a comparable price per unit of one of said commodity items;

for each type of commodity item, multiplying said price per unit by said size total value, thereby creating an market price total for each type of commodity item;

calculating a summed market price total from the summation of said market price total of each type of commodity item; and

comparing said summed market price total by said total type price, thereby creating the normalized price data value.
